

Product Specifications

Product Name: Be used pipe of PVC pro-environment stabilizers

Product Aspect: white or yellowish powder

Product Model: RT-800B1

Product Features:

- 1、 The pro-environment stabilizers choose heterocyclic organic compounds as core materials. It own high heat resistance and good weathering performance, to ensure that the product has good early color and long-term stability and excellent **weather resistance**.
- 2、 The pro-environment stabilizers can be used with lead and organic tin but without **cross contamination**.
- 3、 The pro-environment stabilizers own high efficiency and **cost-effective**.
- 4、 The pro-environment stabilizers have excellent internal and external lubrication and own a excellent processing performance, **gift the products with bright surface**

Product Usage:

The pro-environment stabilizers especially suitable for different sizes of corrugated pipes and high processing performance requirements filling pipe, and can also be used for general PVC pipes processing. According to the product specifications and machine condition should be appropriately regulated lubricant.

Dosage: The pro-environment stabilizers use volume from 5 to 6 per 100 PVC

Standard:

According to the third party international specification, the product conforms EN71-3, RoHS, PAHs(18 items), Phthalates(21 kinds), PFOS/PFOA, NP, BPA, REACH-SVHC.

Product Storing:

Advice to put the product in dry and draft chamber. Please using up asap once package opened.

Product Packaging: 25Kg/Package
